Production ANDON Display Systems

ANDON DISPLAYS can be custom built to suit user requirement and are very effective in making real time monitoring of any production system. KVAR Tech, offers such production displays to show information such as production count, turn around time, shift count, total production efficiency, information display systems, production display systems etc. as per user requirements. Electronic ANDON display boards allow the operators, supervisors and the management executive to get the real understanding of the performance of the machines.

ANDON DISPLAY System Features:

- Numeric as well as alphanumeric character displays. User can give customized messages like welcome message to visitors / delegates or wish happy birthday to workers and employees. It can also be used for giving fault messages in the system.
- Built in counter for production counting with storage in case of power off. These displays can have their own counting capability with memory storage. Thus they can be stand alone independent of PC or PLC keeping track of data.
- Storage of the shift production during the day, production during the month etc. This information can be transferred to PC for further report generation and processing.
- **Indoor as well as outdoor visibility displays**
- **Character size from 0.5 to 1ft or more**
- Round LED indications for events. LED lamps glowing can be used for of different events. These LED clusters can be different colours or multi colour to change the colour depending on the event e.g. when machine starts LED indication can be GREEN and when the machine stops, it can turn RED.
- Different character colour like Red, Green, Amber, Blue etc.
- RS232 / RS485 / Ethernet TCP/IP interface with ASCII / Modbus protocol. User can interface these displays to PC / PLC / SCADA Software for updating data automatically from time to time.

Salient Features

- Brings immediate attention to problems
- Enables prompt action
